

## Watermark

Create, insert, and remove text or image **watermarks** to brand your users' work and discourage its unauthorized use.

A PDF watermark is an element such as a backward layer of transparent text or image added to a PDF document to maintain confidentiality and copyright protection of the document and to highlight information about the company or group to which it belongs. Watermarks can be text, images, shapes, a fixed logo, or dynamically generated text or images.

Adding a watermark to ComPDFKit PDF SDK is very simple and can be done through the API provided by CPDFWatermark to add a text watermark or an image watermark. You can set the watermark position, color, transparency, font, size, and other parameters to achieve different needs.

To add a watermark, use the function **CPDFDocument.InitWatermark (C\_Watermark\_Type type)**.

To remove all the watermarks in a PDF document, use function **CPDFDocument.DeleteWatermarks()**.
